

AI Negotiation Copilot — One-Page Brief

What it is: A real-time coaching agent on your glasses. It listens to a live, in-person negotiation and surfaces the next move on your lens — hands-free, eyes-up, in under a second.

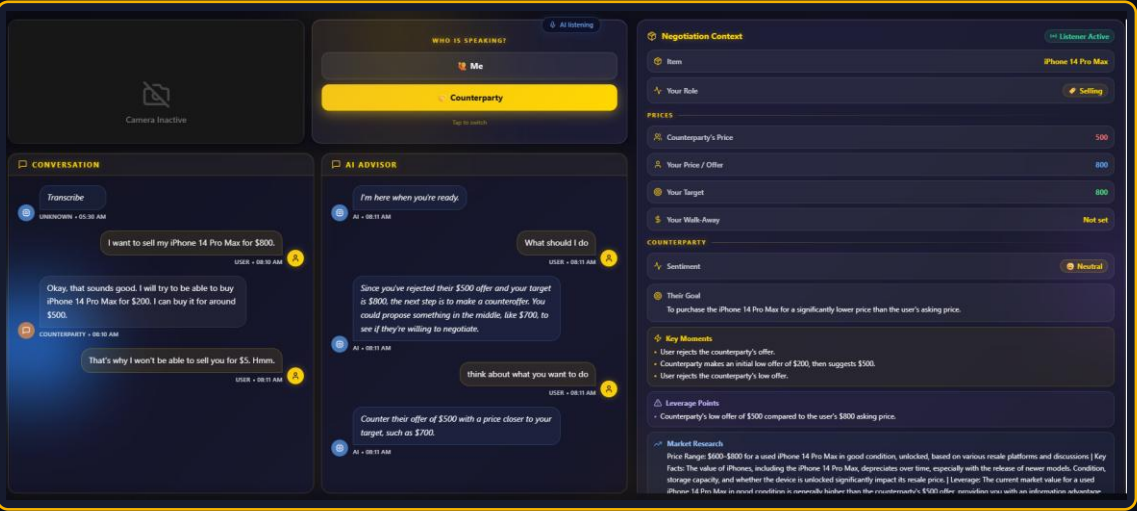

THE PROBLEM

- You can't look at a phone mid-negotiation — it breaks eye contact and signals weakness.
- The right counter-offer or market price is worthless after the moment passes.
- Most people negotiate blind on their most expensive decisions.

WHY GLASSES (FORM-FACTOR FIT)

- Glanceable & hands-free — coaching lives in your field of view.
- Real-time & ambient — cards appear the instant leverage shifts.
- Voice-first — “Ask AI” by voice, spoken guidance back.

TECH — BUILT ON GEMINI, ALREADY DEPLOYED

Live session: the copilot extracts context, flags the \$500-vs-\$800 gap, pulls market data, and says “counter at ~\$700.”
